You have been captured by monsters... Again? Yes, again.

How does this keep happening to you?

This time, you were on a mission to slay the evil Goblin King, the latest monster to terrorize the land.

But as usual, you got yourself caught by his henchmen.

Now you must battle your way out of the prison dungeon, navigate your way through the land, and find and defeat the Goblin King.

Good Luck!

Ever since I first played The Legend of Zelda at my neighbor's house in 1987, I've been dreaming of making a Zelda-like adventure game for the NES.

Finally in 2005, I learned Gameboy Advance development, and set out to make the game I had in my head. 3 years later, Anguna was released.

But I always had hopes of making a game for the NES. Fast forward a few years, when, on a whim, I decided to make an Atari 2600 demake of Anguna, just to see if it could be done. It ended up coming together quite well, and in the process, I ended up learning 6502 assembly, which is what I needed to make NES games!

Later, during a lull in development of another project (Halcyon), it sounded like a fun project to do a direct port from the Atari 2600 version of Anguna to the NES. The result of that is what you hold in your hands today. Thank you for helping my dream become a reality!

SECRETS

As you explore the world, you will uncover many secrets.

Defeating all of the enemies in a room may uncover a hidden item or reveal a secret door. Some walls are not as they seem, and you may be able to pass through what appeared to be a solid wall. Use your map for clues, and question every seemingly dead end. Some rooms are shrouded in darkness, but a lantern can help with these. Beware, however, as traps and enemies litter the caves and dungeons of Anguna!

SWITCHES

During your travels you will find doors that are controlled by switches. To open them, you must locate a switch and hit it with your sword. Be warned: flipping a switch will cause other doors to close.

All switches are on the same "switch network" - when you toggle one switch from red to blue, all other switches will also changes from red to blue. You may to have backtrack and toggle switches multiple times in order to open and close the right doors to advance.
